

A short summary:

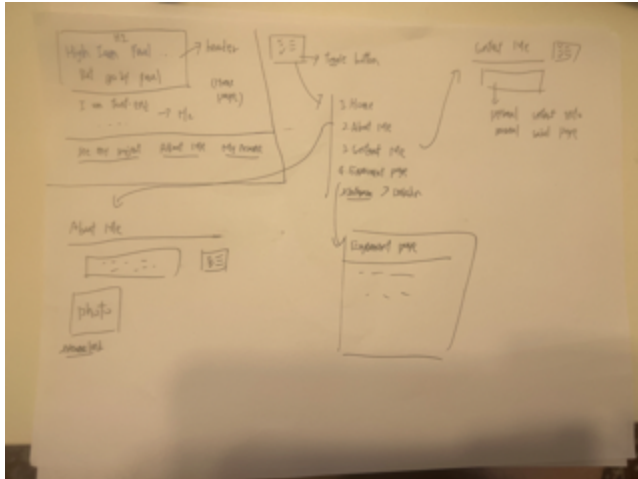

This site is going to be my personal portfolio with the lab section included to test out some html tag I've never used before.

For this HW2 this site will only include html with minimize amount of js and css.

Wireframe(s):

1. Technical requirements: I think my main target for this portfolio is to make it accessible on both mobile and laptop version (laptop is priority). And if possible I would still like to use vue or react to implement website because I feel like they are still a important tool to learn at the end. Moreover, there are lots of animation feature I would like to try in the CSS/JS part.

2. Content requirements

I think I still need some aesthetic advice/design idea for my website because there are so many things I can do we CSS/JS but sometimes i am taunted by the variety kind of choice.
